

S34-TSH Switch

The S34-TSH Switch provides basic control for operating the On/Off and High/Low features of the **Two Stage Hardwire (TSH) Sunpak Heater**. This switch was design to be used on the low voltage side of the 24 VAC transformer. There are two power input wires (24 VAC) and three output wires. The switch box allows for easy conduit connections. The box will accommodate most common water proof covers as may be required.

Note: Plugs and mounting hardware are shipped inside the electrical box and should be removed before installation.
